(B) Possible symptoms for each fault location

Fault Location (Contents of malfunction)	Symptom
1. When IC1 (CPU) is faulty.	1. System doesn't operate at all. No picture at all.
2. When IC2 (OS ROM) is faulty.	1. Since this is the program which operates the system, no picture will appear. 2. Depending on the case, a mosaic pattern may appear.
3. When IC3 RAM is faulty.	1. Since this is the unit that temporarily records data, no picture will appear. 2. Depending on the case, a picture may appear, but it is easily distorted.
4. When IC4 is faulty.	1. Since this IC emits several control signals, no picture will appear. 2. Controller may not respond properly. 3. Pause, reset may not respond properly. 4. If no oscillation is present, clock 3.58 MHz is not produced, with result that system does not operate at all; no picture will appear.
5. When IC5 is faulty.	In addition, several control signals are involved; if fault is present, system will not operate and no picture will appear. 1. Even if a picture appears, characters may be distorted. 2. Colors may be improper. 3. Sound may appear alone without picture. 4. Picture may appear alone without sound.
6. When IC6, IC7 are faulty.	1. Since these parts are responsible for temporarily storing color data, picture may not appear. 2. Even if picture appears, colors may be improper. 3. Characters may be distorted. 4. Picture may be move sluggishly or jerkily.
7. When IC8 is faulty.	1. Since this is +5 V stabilized current, if malfunction is present, uniform +5 V is not present; system will not operate and no picture will appear. 2. LED doesn't light.
8. When IC9 is faulty.	1. Since this part converts the RGB signal to composite mode, a malfunction will result in no picture. 2. Even if a picture appears, color may be abnormal.

(C). In the event picture appears alone without sound

Service Procedures	Fault Location
1. Is audio signal output from pin 15 of IC5? (1) MAX 300 mVp-p (2) 20 Hz-20kHz	1. Soldering is faulty. 2. PCB pattern is cut. 3. Q48, Q49, R47 are faulty 4. R46 is faulty 5. IC5 is faulty. 6. RF modulator is faulty.

(D) In event picture is not present.

Service Procedures	Fault Location
1. Is video signal present at pin 3 of RF modulaor? 2. Is video signal output from pons 19 and 20 of IC9? 3. Is RGB signal present at pins 1,2,3, and 4 of IC9?	1. C38, R29 is absent or faulty. 2. Soldering faulty. 3. PCB pattern is cut. 4. RF modulator is faulty (when picture is present on RF). 5. IC9 is faulty. 6. Peripheral parts around IC9 are faulty.

pin 19 = 2.5V
 pin 20 = 3.0V
